Using corpus of 10,000 common English words, create a new file that consists of each consecutive non-overlapping sequence of five lines merged into one line. Here are the first 10 lines of ouptut corresponding to the above sample corpus:

```
the of and to a
in for is on that
by this with i you
it not or be are
from at as your all
have new more an was
we will home can us
about if page my has
search free but our one
other do no information time
```

.
If the last group has less than five at the end, just write out the last group. Here is your function signature: `write_chunks_of_five(words,fname)`. The `words` is a list of words from the above corpus and `fname` is the output filename string.

Please put your Python code in a Python script file and upload it. Please retain your submitted source files! Remember to use all the best practices we discussed in class. You can use any module in the Python standard library, but third-party modules (e.g., Numpy, Pandas) are restricted to those **explicitly** mentioned in the problem description.

---

## Tips:

- After you have submitted your file, do **not** use the browser back or reload buttons to navigate or open the page in multiple browser tabs, as this may cause your `attempts` to decrease unexpectedly. It may take up to thirty seconds for your code to be processed, so please be **patient**.
- If you find yourself back at the main page without any feedback or change in your `attempts` then it means that your code timed out or crashed in some unexpected way.
- Ensure that your development environment does not presume the existence of certain packages for the autograder. The autograder does not have anything other than the standard library and those third-party libraries **explicitly** named in the problem description.
- Do not leave extraneous statements in your code like test cases, print statements, or anything else besides what is needed to evaluate your submission because the the autograder will spend its limited time executing those lines, which may result in unexpected crashes or timeouts.
